

O-Rings, Oil Seals, Gaskets, everything of rubber...

We offer vast range of seal ups, which are applicable in numerous machines and devices including:

- cars and other vehicles,
- building machines,
- boilers,
- precise and forcible mechanics devices,
- hydraulic and pneumatic devices.

Our products are used in almost every branch of economy, such as:

- building industry,
- electrical engineering,
- power and heating industry,
- railway system,
- aviation,
- precise mechanics,
- motorization,
- chemical industry,
- machine industry,
- marine and naval industry,
- food industry,
- extractive industry,
- agriculture.
-

Untypical seal ups are produced with our own industrial park or brought to you in convenient time.

Our firm possesses many devices, one capable of carving flat sealing form any raw material and The Seal-Jet machine on which we can make extra untypical seal ups.

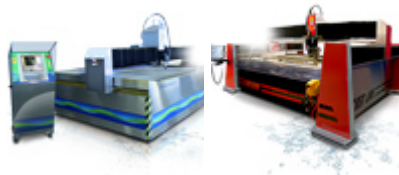

Above all we have hose pointers for high-pressure hoses, which allows high quality hose riveting.

Strong Rope Sp. z o.o.
Sloneczna Str. 36-1
PL 72-100 Bialun
NIP: 856-19-39-204
VAT: PL8561939204

Machine park

Waterjet 2.5D

Thickness to about 200mm (depending on the material).
Workfield: 3000mm x 2000mm.

Waterjet 3D

Just like 2.5D with a big exception - 3D cut, at an angle of 45 deg.

Thickness to about 200mm (depending on the material).
Workfield: 2500mm x 1200mm.

The WATER JET technology is cutting the various materials with using water under the high pressure. The process of the computer guidance enables the precise cut about the best quality, as well as the repetitiveness of dimensions.

Plotter 2D

Working field: 1300mm x 800mm

Plotter - Milling 2,5D

Maximum working field: 2000mm x 1500mm

Plotter - Milling 5D

Maximum working field: 3100mm x 2100mm

Cutting with oscillating knife, milling, material planning.

Thickness to about 10mm (depending on the material).
Materials can undergo a double-sided tape (Metro, rubber, etc.)

Lathes

Turning details (only for plastics, rubber).

Maximum 40mm detail length.

Maximum diameter Ø700mm (all dependent on the profile)

Laser plotter (cutting and engraving)

2D cutting and engraving on the turntable.

Cutting thickness to approx. 5mm, (depending on the material).

Detail engraving with a height of about 300mm (depending on size)

Workfield: 600mm x 400mm.

We specialize in the production of technical seals.

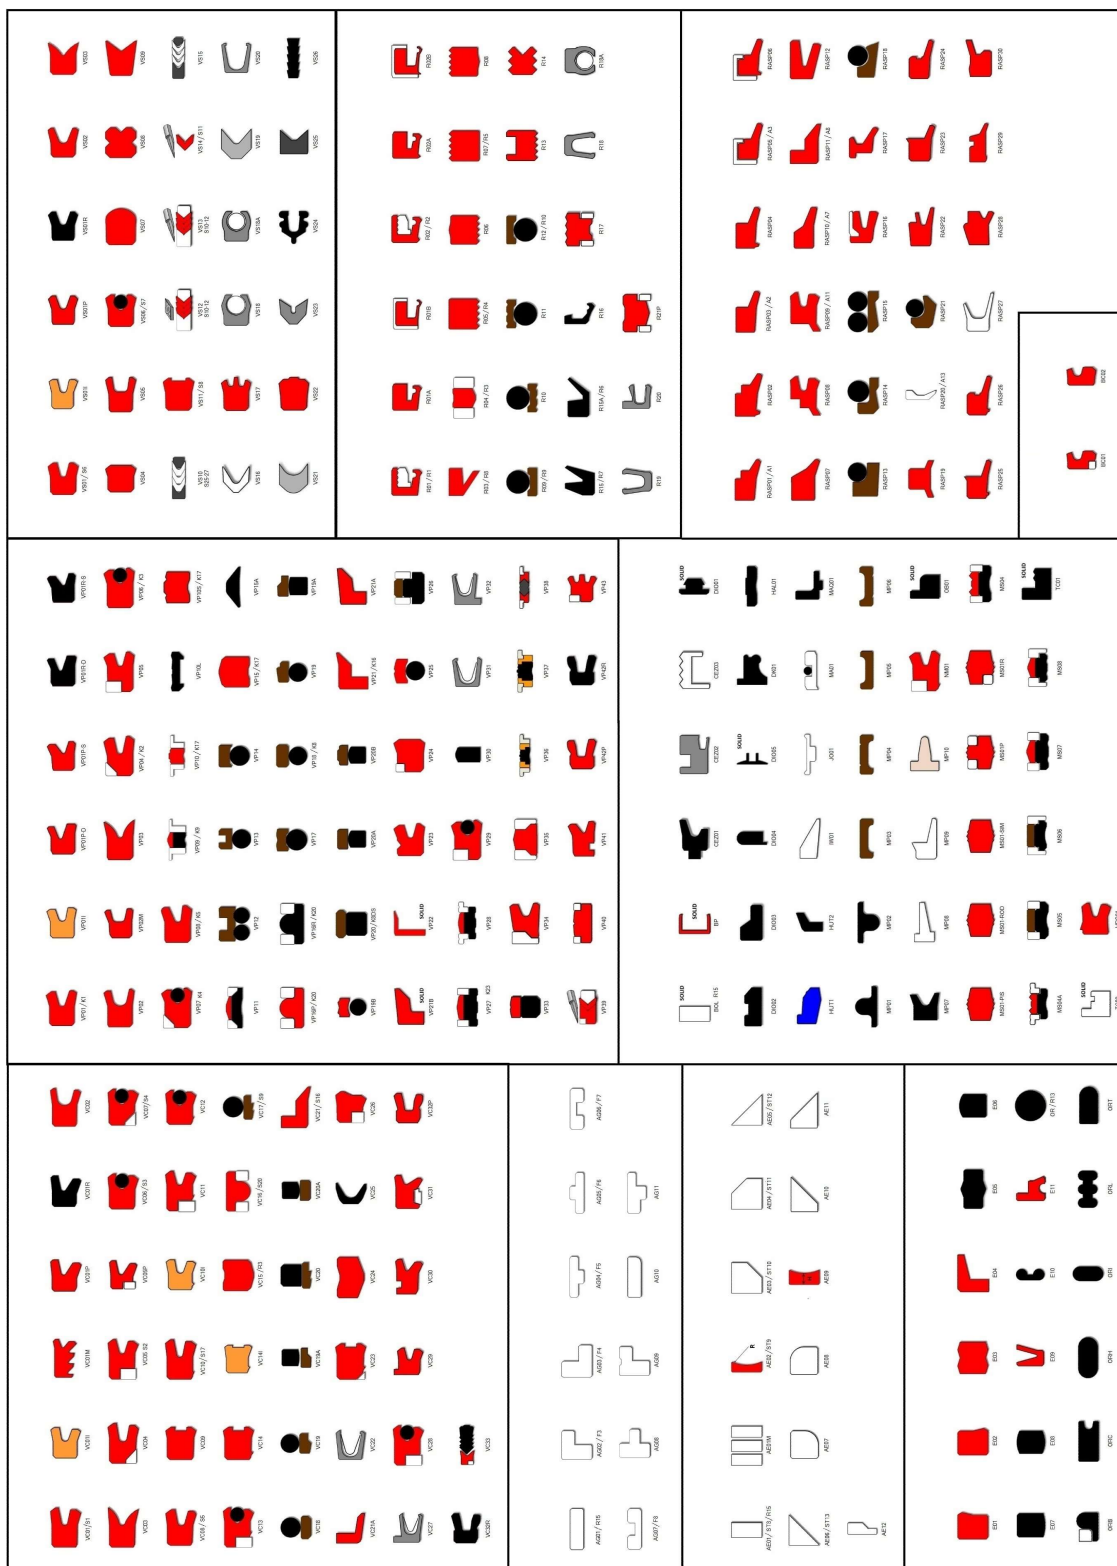

We have a team of specialists that support numerically controlled machines: lathes, milling machines (also 5D), plotters and water cutters Water Jet 3D with the possibility of cutting at an angle of 45 degrees.

Our machines work with various types of materials: rubber, foams, plastics and some metals.

We produce typical and custom seals, and thanks to the diversity of the machine park and the flexibility and creativity of our crew, we carry out various projects, including artistic.
